Valentine One Upgrade to V1 Remote, Instructions, April 2008

1. Your Valentine One Upgrade to V1 Remote parts are described below
 - a) Bottom Enclosure
 - b) Top Enclosure
 - c) Foam insert
 - d) Long Power Cord, 12 to 14 feet
 - e) Short Power Cords 6 Feet
 - f) Remote Display
 - g) Remote Audio Control
 - h) 6 self tapping screws (includes extra screws) + Installation Bar (as needed) + J Hooks

2. Your Enclosure is packaged as one piece in your order. Gently separate the top enclosure from the bottom enclosure, and set the bottom enclosure on a table top. Note the power cable installed in the enclosure can be removed, but do not remove it. Note how the cable is wrapped inside the enclosure to prevent the cable assembly from being pulled out of the enclosure, when fully assembled.

3. Turn the power button of your Val 1 on (fully clockwise), and turn the rotary dial around the power button fully clockwise. If you forget this step, you will have to open the V1 Remote up later after you have assembled the V1.

4. Insert your Valentine one in the bottom Enclosure by holding the Val 1 as shown right. Connect the RJ11 plug at the left into the Val 1 RJ11 jack on left side, and gently set the Val 1 down in the bottom enclosure. There are position tabs to center the Val 1 in the correct center position of the lower enclosure.

5. Once you have the Val 1 plugged in with the power button turned on, your V1 should look as shown right.

6. Place the top Enclosure on the table and open the Silicon Tube provided by opening a small hole at the tip. DO NOT MAKE A LARGE OPENING, AS THIS WILL ALLOW TOO MUCH SILICON TO COME OUT WHEN SQUEEZED. Start at one corner and run a silicon bead into the female opening around the enclosure. Don't worry if the silicon runs a little to the outside, as you can wipe it off later. It is important to get the silicon in the female groove all the way around.

7. The Val 1 is setting inside the bottom enclosure. Set the top enclosure down, and go to your bottom enclosure, and gently lift up the cable insert (where the RJ11 cable comes into the bottom enclosure) and lift it just above the opening as this image shows. To the right. Using your Silicon tube, squeeze silicon all around the connector. Squeeze silicon into the front and back of the connector, filling the connector inside; such that when you pus it back down in position, the silicon seals 360 degrees around the connector. Don't worry about how much silicon you squeeze into this area. Be generous as you are making the Valentine water tight.

8. Place the foam insert on top of the Valentine One, centered on top of the Val 1

9. Place top enclosure over the bottom enclosure and gently insert it into position. The front polished plate will slide down in to the front grooves of the bottom enclosure. Note the bottom enclosure has a male fitting that runs on the top of the edges. The top enclosure has female fitting, where the male bottom enclosure fits inside the male top enclosure. When fitted properly, the two top and bottom pieces fit very close.

10. Hold the assembled units together and turn over and lay down on the table, holding your hand on top of the assembled enclosures. Place 6 screws down inside each screw hole and use a screw driver to gently push each screw down to the bottom of the hole. Using your screw driver, screw one corner down, go to each corner and screw down, then the middle two screws. When all 6 screws are tightened, go back and gently re-tighten each screw. Do not over tighten! If you have a torque wrench, start at your lowest setting and work upwards until you have screwed all 6 screws in with the same torque setting. **Allow the V1 Remote to dry overnight before going to the next step.**

11. Hook up the V1 Remote as shown below

Install according to the following diagram:

12. Connect to Vehicle 12 volts, turn power on the remote audio unit and ensure the V1 boots up correctly. If the display does not turn on, you have wired the V1 Remote modules incorrectly. Check each connection and find what has been mis-wired. When wired correctly, the display will light up and go thru a self test; and the volum control on the audio using will control volume and On/Off. When you are sure you are operating correctly, go to step 13.
13. Use J Hooks hardware to install Remote Kit behind grille of vehicle, or on top of Ski Rack, or just under the bumper. The higher the position, the better the performance. A bracket is provided.
14. If your vehicle is an SUV or pickup truck or larger, you can install under the bumper. If the install location is good (typically just under the height of the bumper and approximately 18" back), the V1 will detect radar to the front with excellent sensitivity and to the rear with reasonable sensitivity. Do not install too low due to potential road damage to the V1 Remote, when parking or going over parking lot bumps.
15. The cable protruding from the Remote Kit is the rear of the kit facing the engine compartment.
16. If installed behind the grille, rear radar detection will be significantly reduced. Ensure no metal is in front of the V1 Remote, and ensure V1 Remote is kept away from radiator to prevent heat damage. If installed inside a front, foam core bumper, ensure no metal is in front of the V1 Remote.
17. Run the 14 foot cable into the cockpit and hook up according to electrical layout highlighted above. **If the cabling is ran differently than shown above, there will be no display on the Remote Concealed Display.**
18. Call TLP on any questions you have or to order remote electronic display, audio control and cabling.

How To Change V1 Remote and Valentine One Programming. Call us at 303-678-9101 if you want help in changing your V1 modes of operation. Change Modes at your own risk!

I. How to enter the Programming Mode.

- Starting with the Control Knob in the "off" position, Press and hold-in Knob and at the same time turn the Knob "on;" continue holding in the Knob until all front-panel lights are on (takes about 5 seconds).
- Release the Control Knob.

II. How to determine your software version.

- Press and immediately release the Control Knob (shown at right) to display software version. The software-version number is four digits that display one digit at a time in the Bogey Counter-example: 2.869.
- Note your software number, then see the tables on the following pages on features programmable in your unit.
- Press and immediately release the Control Knob to exit software-version display and go to Step 1 programming.

III. How to program your desired features.

- The feature character is indicated in the "Bogey Counter" (1, 2, 3, 4, 5, 6, 7, 8, A, b, C, d, E, F, G, H, J, or u).
- To select the next Feature Character in the sequence, press and immediately release the Control Knob.
- The Feature State is indicated by direction arrows on the Radar Locator. The Feature State is changed by pressing and holding the Control Knob until the arrow switches to the opposite direction (takes about 3 seconds). NOTE: If you need to return to an earlier Character in the sequence above, we recommend you switch off the power momentarily, then restart at step I above. **The numerical program modes of interest are as follows:**

- US/Canadian/HK** Frequency: #1 (X band **ON** =  **OFF** = ) **Don't change any other mode on US/Canada!**
- EUROPE / AU** Frequency #1 (X band **OFF** = )
- EUROPE / AU** Frequency #2 (K = 24.125GHz : **ON** = )
- EUROPE / AU** Frequency #3 (Ka band **ON** = )
- EUROPE / AU** Band #4 (Laser **ON** = )
- EUROPE / AU** Frequency #4 #H (Ku **ON** = )
- EUROPE / AU** Frequency #J (POP3 **ON** = )
- EUROPE / AU** Frequency #U (Euro Ka = 34.2GHz, Narrowband Ka **ON** = )

Do not change any other mode!

IV. How to exit the Programming Mode.

- Switch power off, or unplug. The changes you programmed will be retained in memory.

V. How to tell if V1 has been changed from factory settings.

- If the unit has been changed, P will appear briefly in the Bogey Counter soon after V1 is switched on (after the lamps-on test, but before the Mode indicator appears.)
- On V1s with serial numbers ending in 0600 or higher, a flashing red LED just to the right of the Bogey Counter during the sequence above indicates that Ku coverage has been activated.

Feature Character Bogey Counter Arrow Direction	Description	Software Version								Factory Setting
		2.880 - 2.885	2.886	2.889	2.878 - 2.888	2.879 - 2.892	2.872 - 2.873	2.874 - 2.877	2.871 - 2.876	
This section allows you to turn off coverage of each radar band and laser.
