Blinder X-Treme™ M20 & M40 Active, Laser Jammers

Superb Laser Detection & Active Jamming of all laser guns in Americas, Europe, Asia

- Waterproof; Resistant to false noise from sunlight and road reflections
- Jams all laser guns from any distance all the way to the laser gun
- Provides time for the driver to adjust their speed
- Superb, hidden in the grille, high performance laser gun protection
- Scans constantly for laser, locks on to laser pulse rate, blanks the gun speed display

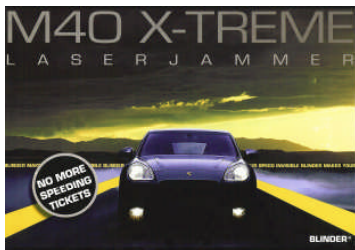

DOT bans the use of radar detectors in commercial trucks. Virginia/Wash. DC bans the use of radar detectors. CA, MN and UT ban the use of Laser Jammers. TLP products are road certified for performance by Speed Measurement Laboratories, neither company which condones speeding. Blinder is a trademark of Blinder USA, a partner of Tiger Lily Products.

High Performance Laser Detection and Jamming

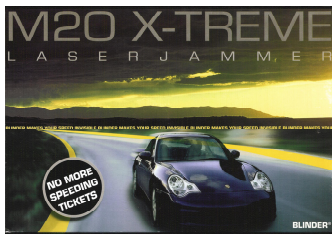

The Problem: You're driving down the highway and a policeman targets your headlights or license plate with an invisible laser gun beam for the purpose of acquiring your vehicle's speed. If you only have a radar detector, the laser gun has already detected your vehicle speed, if your radar detector even alerts you. It is too late to check your speed, unless you're driving with Blinder protection.

The Solution: Install a Blinder™ M20 X-Treme in the front grille or M40 X-Treme in the front grille and rear bumper to defeat every known laser gun being used today. Blinder™ M20 & M40 have been tested by Speed Measurement Labs (SML), and

RadarTest.com. Both agencies have certified the Blinder X-Treme to prevent laser gun speed detection from maximum distance of the laser gun to the laser gun on every laser gun used today. Blinder™ seriously outperforms the Escort ZR3, Bel LP905, K40 Laser Defuser and RMR passive scramblers by a wide margin. We don't make vague claims. We prove our performance with certified test results! The typical distance of laser targeting is 1000 feet, and even at posted limits of 75mph, the Blinder™ would give you plenty of time to adjust your speed after the laser alert, thus allowing you to safely slow down for 2-3 seconds, then shut the jammer off after you have achieved the posted speed and allow them to detect your "adjusted" speed. Let them read your speed after you have slowed down.

Blinder™ M20 X-Treme, Dual Laser Jammer will jam front laser on mid-size cars and motorcycles
Blinder™ M40 X-Treme, Quad Laser Jammer will jam front & rear laser on cars, trucks and SUVs

Blinder™ has been tested by Speed Measurement Labs (SML) and has received SML's certificate of performance, as noted below. The test report can be reviewed at <http://www.1-radar-laser-jammers-detectors.com/our-store/laser-jammers/m40-tests.php>. Blinder™ is a proven active laser jammer and can be used in conjunction with a good radar detector, such as the Escort 8500 X50, V1 Radar Detector or Bel STi Driver™ (100% RDD invisibility). These are the very best radar detectors on the market with the capability to detect Ka radar at 10 miles or better, minimize false alerts and detect POP3 radar guns. Blinder™ and the below radar

detectors can be purchased separately or as part of our PROWLER Remote™ Systems.

Rated #1, 360° High Performance, PRS1-V™ Prowler Remote™ System
