## Photo Speed Camera Defender: SCD-M for Motorcycles

Superb Photo Speed Camera Detector/Defender, Emergency Vehicle Alert and License Plate Light

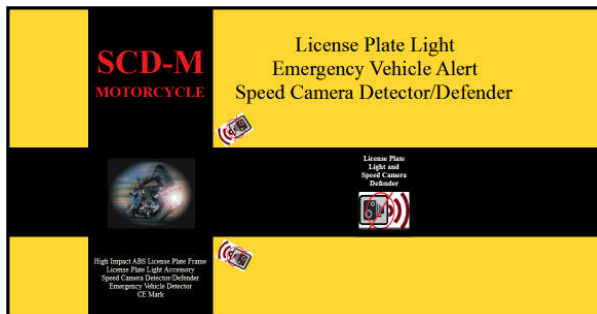

- Detect all Speed Cameras, Red Light Cameras and Mobile Van Speed Cameras, 100%
- DETECTS and PROTECTS from a double flash or single flash Speed Camera attempt
- Doesn't Interfere with Speed Camera operation as with existing Flash Back Photo Jammers
- Designed to flash down safely on your license plate, not designed to flash back into eyes of drivers
- Dual Mode operation for DETECT and DEFEND plus Lights or License Plate Lights only

## High Performance, Speed Camera Detector/Defender + License Plate Light Mode ★★★★★

**The Problem:** You're driving down the highway and drive by a speed camera or red light camera. The camera flashes and you did not even notice, but two weeks later you get a "Ticket in the Mail for \$350, \$250 or \$150. You did not even know you had driven by a speed camera, yet it detected your speed, flashed the camera and a computer sent the ticket to you. Safety had nothing to do with it. It is all about increasing revenue and traffic fines, but the SCD-M prevents those unfair fines and gives you on/off speed camera protection on your car, truck or motorcycle.

## The Solution: SCD-M for Motorcycles around the World

Install the SCD-M Photo Speed Camera Defenders on your rear motorcycle license plate to protect your motorcycle license plate from all speed cameras, red light cameras and mobile photo vans. Special Motorcycle Adaptor included that supports any motorcycle worldwide.

Many cities today in the USA, Canada, NZ, AU, UK have a multitude of photo speed cameras, all designed and installed to take a picture of your motorcycle license plate and mail you a ticket without letting you know. The SCD-M Photo Speed Camera Defender will easily protect you, because it detects every single camera flash or double camera flash attempt on your license plate. It does not matter whether you or any speed camera takes the picture. You won't get a

License Plate image. Driving in the city past a speed camera or red light camera will not matter. It does not matter whether a mobile speed van attempts to photograph your License Plate with a hidden camera in the back of the van. The SCD-M will detect their attempt to photograph your license plate. It does not matter whether there are two camera attempts, the Speed Camera Defender will still detect the two camera pulses and protect your license plate from being photographed. **SCD-M is not designed to flash back at the camera, nor does it interfere with radar guns, laser guns or speed cameras.** Competitive Flash Back Jammers actually aim light at drivers behind you, but the SCD-M does not. Due to a lack of power, Flash Back jammers can not completely block photographs from Mobile Vans, Speed Cameras or Red Light Cameras. The SCD-M Photo Speed Camera Defender does it all, legally and offers a discretionary "Lights Only" mode, so that you control when to protect yourself and when to detect only. The SCD-M was thoughtfully designed for your driving habits.
