Speed Camera Eliminator: SCD-1, SCD-2, SCD-3, SCD-4, SCD-M

Superb Speed Camera Detector & Speed Camera Defense + License Plate Lights mode

- Detects all Speed Cameras, Red Light Cameras and Mobile Van Speed Cameras, 100%
- Electronically prevents images of your license plate(s) by TRAFFIC CAMERAS, worldwide
- Does not interfere with Speed Camera operation as with Flash Back Photoblockers
- Does not interfere with Radar Guns, Laser Guns or Magnetic strips under the road surface
- Dual Mode operation, quick power change from Photo Eliminator to License Plate Lights

High Performance, Photo Radar Eliminator + License Plate Light Mode

The Problem: You're driving down the highway and drive by a speed camera or red light camera. The camera flashes and you did not even notice, but two weeks later you get a "Ticket in the Mail as a big \$\$\$ fine. You did not even know it detected your speed or flashed the camera at your vehicle. Safety had nothing to do with it, as it is about increasing revenue and traffic fines. The SCD Photo Radar Eliminator prevents unauthorized photographs of your license plate(s) by speed cameras, red light cameras, mobile photo radar vans.

The Solution: SCD-2, SCD-1, SCD-3, SCD-4 (vehicles) or SCD-M (motorcycles)

Install the SCD Speed Camera Eliminator on your front and rear, vehicle license plates; or on your rear motorcycle license plate to detect when they try to take a picture and alert that the SCD prevented an image of your license plates. 100% Legal.

APC Power Control

SCD-2 Front and Rear

SCD-M Motorcycle

SCD-4 Wide Plate

The APC Power Control Grid is included allowing you to connect your radar detector, laser defense and SCD photo defense all to one power control, using one power switch to control power. The beauty of the APC is that it gives you a an ACTIVE Power Mode II, turning your laser defense on, photo radar defense on and radar detector on with one flick of a switch. Then, should you need to operate in a SAFE Power Mode I, turn on only your license plate lights and laser Park Assist. All with the flick of a switch. No hunting for 3 power switches when you need to shut all power down in a hurry. No swerving on the road while searching for all those power switches. Just turn the single APC power switch to ACTIVE Mode II or SAFE Mode I.

Many cities today in the USA, Canada, NZ, AU, UK have a multitude of photo speed cameras, all designed and installed to take a picture of your vehicle license plate and mail you a ticket without letting you know. The SCD-2, SCD-1, SCD-3, SCD-4 and SCD-M Photo Radar and Speed Camera Defense will easily protect you, because it detects every single camera flash or double camera flash attempt on your license plate. It does not matter whether you or a highway speed camera takes the picture. The SCD electronically prevents a photograph of your license plate. Driving past a speed camera, red light camera or even a Mobile Speed Photo Van does not matter. They can not photograph your license plates. It does not matter whether there are two camera attempts using white light or infrared light; the Speed Camera Eliminator will still detect the camera attempt and electronically protect your license plate from being photographed. SCD products are not designed to flash back at the camera, nor do they interfere with radar guns, magnetic strips or speed cameras. Competitive Flash Back photoblockers actually aim light at cameras and drivers behind you. Our Photo Radar Eliminator does not interfere with the camera or radar or laser speed devices. Past back photo jammers were unable to completely block photographs from Mobile Vans, Speed Cameras or Red Light Cameras. SCD prevents all speed cameras from getting your private information.

As you see above, the SCD Photo Radar Speed Camera Eliminator is totally capable of protecting your license plates. The SCD Photo Radar Eliminator is the photo defense you have been looking for and the SCD has the superb APC power control, added free. The SCD offers Photo Defense and a discretionary "License Plate Lights Only" mode, so that you control when to protect yourself and when to detect only. A thoughtful design for your driving habits!
