SCD-2 Photo Radar Eliminator

Install a very advanced **Photoblocker**, called SCD-2 Photo Radar Eliminator, which includes **License Plate Lights**, on both your front and rear, 12" wide, license plates. The SCD-2 provides NIGHT LIGHTS for your license plates, but also has a DUAL MODE of photo blocker; which prevents a speed camera from taking pictures of your front and rear license plates. AND it is 100% legal! SCD is not a silly, ineffective spray, nor is it a license plate cover, which police write tickets for.

APC Power Cord Accessory Kit included to hook up most windshield radar detectors, Blinder laser jammer and APC Power Switch Extension Cable. **The SCD-2 photoblocker** provides two photo radar blockers for front and rear (12"x6") license plates. The SCD will detect when a photo radar van and traffic camera tries to take a picture of your license plates. It alerts and electronically prevents a traffic camera picture of your front and rear license plates. The SCD-2 Eliminator is easily bolted to your front AND back license plates and connects to the APC power control module in the vehicle.

The SCD-2 Photo Radar Eliminator includes a new and powerful APC, AUTO POWER CONTROL (patent pending), which is a power hub provided at no additional cost. the APC provides a very nice ON/OFF power feature for your radar detector and laser jammer, as well as the SCD-2 Photo Radar Eliminator. Do you have a radar detector and laser detector installed in your vehicle? Perhaps a photo radar detector too! Radar Detector power button on the windshield. Do you have a laser detector power switch down on the center console; perhaps a photo radar, power switch somewhere else. Power cables around the vehicle. When you come into a speed trap, your emotions usually do not allow a calm response, but

demand a frantic search for two or three POWER OFF buttons. The **APC** organizes all those power cables to a single power control module and the APCI permits POWER to be switched on/off to all radar laser photo products with ONE MASTER POWER CONTROL switch. When you encounter a speed trap, you can calmly switch all your radar, laser and photo products from ACTIVE power to SAFE power mode **with only one power control switch for all your radar, laser and photo products.**

The SCD-2 Photo Radar Eliminator is designed to detect the white flash or infrared invisible flash from a speed camera, red light camera (intersection camera) or mobile photo speed van. It prevents images of your front and back license plates. The photo blocker instantly alerts you and protects your license plate with an extremely short duration, electronic light down across your license plate. The white light will prevent a camera from getting your License plate images for that period of time the camera takes a picture of your license plates. The SCD-2 detects and prevents your license plates, whether it comes from a speed camera, mobile speed van or red light, traffic camera.
