Speed Camera Jammer: SCD for USA, Canada, Standard License Plates

Superb Speed Camera Detector & Speed Camera Jammer with License Plate Light

- Detects all Speed Cameras, Red Light Cameras and Mobile Van Speed Cameras, 100%
- Electronically protects your license plate from Red Light Cameras, Speed Cameras and Mobile Vans
- Does not interfere with Speed Camera operation as with Flash Back Photo Jammers
- Does not interfere with Radar Guns or Magnetic strips under the road surface
- Dual Mode operation provides quick Mode change from Photo Jammer to License Plate Lights only

High Performance, Speed Camera Jammer + License Plate Light Mode

The Problem: You're driving down the highway and drive by a speed camera or red light camera. The camera flashes and you did not even notice, but two weeks later you get a "Ticket in the Mail as a big \$\$\$ fine. You did not even know it detected your speed or flashed the camera at your vehicle. Safety had nothing to do with it, as it is about increasing revenue and traffic fines. The SCD Speed Camera Jammer prevents unauthorized photographs of a standard 12" x 6" license plate. You can also power your radar detector and laser jammer using the new APC, Auto Power Control module.

The Solution: SCD Speed Camera Jammer for 12" x 6" License Plates

Install the SCD Speed Camera Jammer on your front or rear license plate, as a single license plate protection. Many cities today in the USA, Canada, UK and AU use

a 12" x 6" license plate, targeted by a multitude of photo speed cameras, all designed and installed to take a picture of your vehicle license plate and mail you a ticket without letting you know. The SCD Speed Camera Jammer will easily protect you, because it detects every single camera flash attempt on your license plate. It does not matter whether the image is attempted by a speed camera or your own digital camera; the SCD will electronically prevent an image of your license plate. Driving past a speed camera, red light camera or even a Mobile Photo Van does not matter. They can not photograph your license plate. **SCD provides an ACTIVE MODE II to provide a speed camera jammer; and a SAFE MODE I, which only lights your license plate.** The SCD is designed to

protect your license plate and does not interfere with radar guns, magnetic strips or speed cameras. **In addition, the APC, Auto Power Control provides "Plug and Play" installation, and allows you to plug other products into the APC module, such as a radar detector and laser jammer.** The SCD is legal, since it is not a radar jammer and does not interfere with the camera. Protect your license plate when you need to, and be discrete when you have to be by using the APC Auto Power Control and SAFE mode, exclusively from 1stRadarDetectors!
