Equalizer™: VF1, VF2 & VF3 Photo Jammers

Superb Photo Detection, active Photo Jamming in all Americas, Canada, Europe and Asia

- A license plate light is built into the VF products for night driving
- Photo jamming of photo speed traps, toll cameras, red light cameras
- Turns on and off with your ignition key
- Installs easily and quickly on your license plate; water resistant
- Small compact product with superb photo protection for your front license plate; rear VF product is optional

DOT bans the use of radar detectors in commercial trucks. Virginia/Wash. DC bans the use of radar detectors. There are no laws banning the lighting of your license plate. Tiger Lily Products (TLP) and GSG products are road certified for performance by Speed Measurement Laboratories. Neither SML, TLP nor GSG condones speeding.

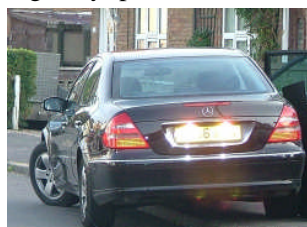

High Performance Photo Detection and Jamming

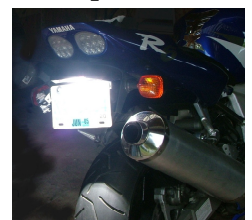

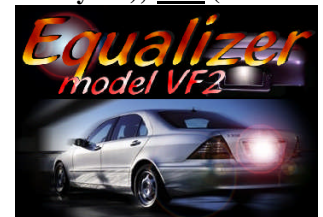

The Problem: You're driving down the highway and a roadside photo trap flashes your license plate with the purpose of acquiring a photo of your license plate registration. If you only had some sort of protection, the photo trap would be useless. It is too late to check your speed, unless you're driving with our Equalizer photo protection: **VF1** (all motorcycles); **VF2** (all US & Canada vehicles); **VF3** (wide Euro/Asian license plates).

The Solution: Install a VF1 on the back of your motorcycle license plate. The VF2 is installed on the front and rear of US and Canadian plates; while the VF3 is installed on the front or rear of wide license plates in Europe and Asia. The VF Equalizer will defeat all known roadside photo camera traps (Truvello, Gatso, Multa-Nova, American Traffic Systems, RedFlex, etc.). The VF is a state of the art, Photo Camera Jamming product designed to defeat highway speed cameras, toll booth cameras and red light, intersection cameras. Using a sophisticated sensor the VF Equalizer immediately detects the police camera flash or infrared pulse, and instantly responds by flashing the license plate with a powerful, bright, downward white light. This causes the plate to instantly turn white, so that the enforcement camera can not image the license plate registration number.

This technology works against all analog photo traps, infrared photo traps and most importantly, against all digital photo traps, which are 99% of all cameras used today. The VF products are far superior to anti-photo license plate covers, such as the Chameleon, anti-photo sprays and photo blocking spray liquids, such as Photo Fog and Photo Blocker, all which are easily defeated by any digital camera. But it is not possible for an analog, infrared or digital camera to use light flash or infrared pulse to acquire the license plate image using a VF Equalizer technology. Check your local laws for use.

Equalizer™ was tested by Speed Measurement Labs (SML) in June 2006 and received SML's #1 performance rating at jamming any photo speed trap camera. The test summary can be reviewed at <http://www.1-radar-laser-jammers-detectors.com/news/index.php>. Equalizer™ is a proven photo jammer and can be used in conjunction with a good radar detector, such as the Escort 9500i, V1 Radar Detector or Bel STi DRIVER™; or our #1 rated Blinder Laser Jammer.
